
Suction Piece for or on a Device for Administering an Injectable Product

ABSTRACT OF THE DISCLOSURE:

A suction piece for a device for administering an injectable product, said suction piece (4) including:

- a) a suction chamber (V, 6) comprising a chamber opening rim via which said suction piece (4) may be placed on a tissue (10);
- b) a connection part (5) in order to produce a mechanical connection to said device; and
- c) a first passage (7) extending through said connection part (5) into said suction chamber (V, 6), in order to produce a fluid connection between said suction chamber (V, 6) and a product reservoir (2) of said device;
- d) wherein the pressure in said suction chamber (V, 6) may be reduced, when said chamber opening rim is placed on said tissue (10), in order to suction said tissue (10).
